EE24BTECH11032 - John Bobby

Question: If $P(9a - 2, -b)$ divides the line segment joining $A(3a + 1, -3)$ and $B(8a, 5)$ in the ratio $3 : 1$, find the values of a and b .

Solution: As P lies between A and B , P can be represented as

$$P = \frac{kB + A}{k + 1}$$

where k is the ratio, here $k = 3$

$$P = \frac{3B + A}{4} = \frac{3 \begin{pmatrix} 8a \\ 5 \end{pmatrix} + \begin{pmatrix} 3a + 1 \\ -3 \end{pmatrix}}{4} = \frac{\begin{pmatrix} 27a + 1 \\ 12 \end{pmatrix}}{4}$$

also,

$$P = \begin{pmatrix} 9a - 2 \\ -b \end{pmatrix}$$

on equating both sides and solving the two equations, we get

$$a = 1, b = -3$$
